25 YEARS

WELCOME TO THE LOCKWOOD WINDOW COMPANY

In 1998 we set up The Lockwood Window Company with the simple aim of offering the widest range of premium quality windows, doors and conservatories, matched by a professional, friendly approach.

We're still continuing to do this today, while providing even greater choice, including composite doors, aluminium bi-fold doors, along with the very latest technologies in energy saving glass, premium quality uPVC frames and state-of-the-art security.

By choosing Lockwood, you'll be working with a company that owns the whole process. We don't use subcontractors, we just use our team of experienced professionals who, in turn, have mentored our apprentices and other trainees. Some of these highly skilled people have been with us since the very start.

We manufacture bespoke frames and ensure that every installation is completed to the highest possible standards.

We install into domestic, new build developments and commercial buildings, and can offer a "supply only" service to both homeowners and businesses. Professional assurance for complete peace of mind. We're extremely proud to have achieved a position on the prestigious MWCIA Top 100 Registered company list.

We're also registered with FENSA, the industry standard for replacement windows, and all our products are covered by an insurance-backed guarantee.

Everything we manufacture is CE certified to comply with EU regulations.

25 YEARS OF EXCELLENCE

When we launched the Lockwood Window Company in 1998 we wanted to change the way people experienced buying windows and doors.

The hard-sales approach that was inherent within the industry wasn't the way we wanted to do business.

We wanted to give our customers a completely different experience, one based on understanding their needs, and working closely with them to help them get the look they want to achieve for their property.

We also wanted to focus on quality, workmanship and outstanding levels of customer service. This is because we know that any investment in the upkeep of your property is an important one.

Since 1998, our industry has seen enormous changes, as well as innovations too. Plus, the arrival of the internet around the time that we started has completely transformed the way all of us experience the world - even when it comes to new windows and doors.

So if you're considering enhancing your property, one thing that hasn't changed is our old-fashioned commitment to service, from experienced people who love doing what they do. With so many design options and a wide range of innovations, every new Lockwood window, door or conservatory starts with a conversation.

So why not come down and see us? In the meantime, head over to lockwoodwindows.co.uk

COMPOSITE DOORS

The look of a solid timber door but with outstanding strength and durability

There are timber doors. There are foam filled doors. And there are Lockwood Window composite doors.

For unrivalled strength, security and durability, the composite doors made by us are designed to give you complete peace of mind that your door is a robust part of your property.

The doors we make feature:

- Solid timber construction
- Thermo plastic outer skins
- PVC outer frame reinforced with galvanised steel
- Astral S cylinder locks.

Cheaper foam-filled doors aren't as strong, or as durable. So, while they may be cheaper, they're by no means as strong, or as secure.

Style, frame, colour - the choice is yours.

There's a composite door for every style of property. Modern technology has resulted in the ability to create doors in a wide range of designs, with an extensive selection of glass options, including obscure glass.

Our French or stable doors are available in a range of door styles, although not all styles can be

adapted to French or door styles. We can explain this to you when you're making your selection. With our bespoke service we can also create shaped doors, and incorporate top lights and side lights into the frame ensuring your new door is probably the most secure on the market.

VISIT OUR SHOWROOM

We actively encourage our customers to come and visit our showroom at Lockwood Scar, Huddersfield, where we can show you our wide range of window and door products, including Kommerling uPVC frames, Pilkington KS Glass, as well as talk you through the energy rating system which is now a statutory framework for measuring the energy efficiency of your windows.

With so many styles, colours and designs to choose from, a member of our team will be happy to show you around. However, if you are planning to visit our showroom we would advise making an appointment to avoid disappointment during busier times, especially Saturdays.

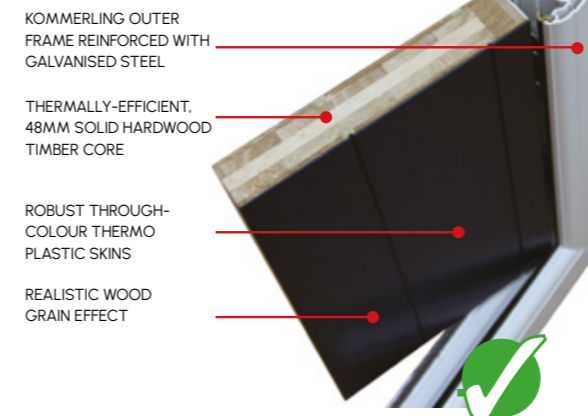

Please call us on 01484 519667 to book.

You can see all the colours and finishes for yourself, and we can also show you the various accessories in a wide range of heritage and contemporary styles to complete the look you want for your home.

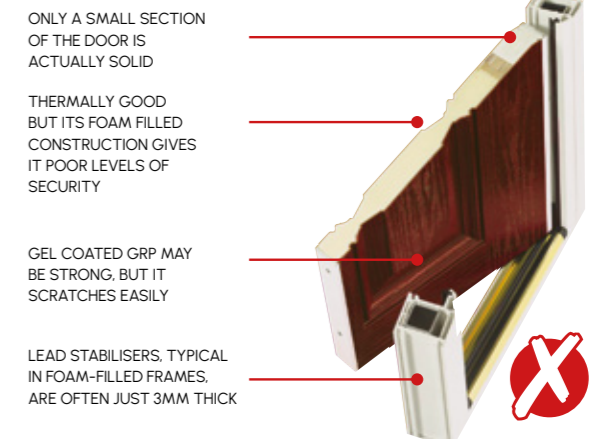

Opening Hours
 Mon - Thurs 8:00am - 5:00pm
 Fri 8:00am - 4:30pm

ENERGY EFFICIENT DOORS & SECURITY

The world has changed in so many ways since we first established Lockwood Windows, and one of the biggest changes has been the way we value energy.

It's now an increasingly expensive household cost, which is why your windows and doors need to play a bigger part in keeping the heat in, the cold out, and your energy bills as low as possible.

The most energy efficient composite door

By choosing a Lockwood composite door you're investing in a premium quality product that will not only be an asset to your home, or business, but will play its part in reducing your carbon footprint.

Here's why:

- Timber used in all our doors is from sustainably managed forests
- Each door can be recycled at the end of its life
- Every door has a 5 chambers uPVC frame
- They also have lead-free skins and edgebanding
- They're manufactured in the UK to reduce transport mileage

You could say, all our doors are green!

Smart glass - Pilkington KS Glass

One of the biggest innovations since we set up business has been in glass technology, and the introduction of thermal energy ratings in 2010.

This means that the glass we now have to use to comply with Building Regulations Part L has to achieve high energy ratings.

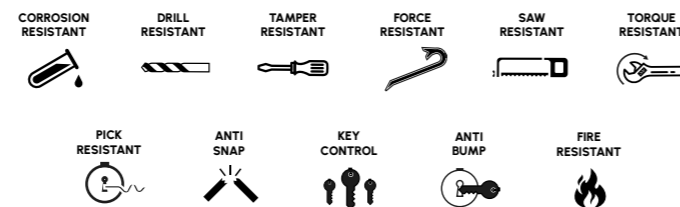

This is why we now use energy efficient Pilkington KS Glass, a low emissivity coated glass which reflects heat back into the room whilst also letting in free heat from the sun. This is known as "passive solar gain".

Safe as houses

A property is burgled every minute in the UK, which is why a key part of your investment in doors and windows is to provide you with maximum security.

With their 48mm thick solid timber core, our composite doors are equipped with Astral S, a pick-resistant, multi-point locking system, and a reinforced door frame, making them the strongest and most secure option available on the residential door market.

We only use the highest standard of cylinder in our locking systems - tested to BS EN 1303, the highest grade for security, proving the highest level of resistance against physical attack.

THE ITALIA COLLECTION

Inspired by the Italian passion for design, our Italia collection brings contemporary looks with understated style to your home. Crafted from the finest materials every composite door in our Italia range is simple and elegant with a touch of Italian chic.

All doors in our Italia collection can be made to bespoke requirements with a choice of glass and accessories. Visit our website to explore the full collection, and ways in which you can make your Italia door uniquely yours.

PAINSWICK STIRLING DOOR WITH FLEMISH GLASS

STIRLING DOOR IN PEACOCK BLUE WITH DORCHESTER GLASS.

ALNWICK, BERKELEY & STIRLING

Drawing on our rich architectural heritage, this charming collection of doors takes its design cues from key eras of our past. With its large-glazed panel to allow an abundance of natural light, the Alnwick Art Deco styling is the perfect choice if you're looking for that distinctive 30s style. Meanwhile, the Berkeley draws its influences from the Georgian era and comes in two styles, as does the Stirling whose typical Georgian styling makes it the perfect choice for either period cottages or modern homes.

EDINBURGH

If you're looking for an alternative to classic Victorian styles, the four-panel Edinburgh is a distinctive design in two different options - either offering complete privacy, or enabling an abundance of natural light to flood into your home.

"A highly professional company.

We were recommended by friends who couldn't speak highly enough of the service and workmanship carried out. I have to say my experience has been exactly the same, a professional local company that takes pride in delivering a first class service.

Their whole approach from start to finish was exemplary, from the initial technical explanation, offer, expert fit and job completion, all works carried out with great assurance. We have had 28 windows and more replaced and can't thank Richard, Raymond, Simon and Lewis with enough praise for a job expertly well done."

BEESTON FLINT STABLE DOOR IN IRISH OAK

COMPOSITE FRENCH DOORS

Our French doors are available in all our composite door styles. Fantastique!

Previously we could only offer these in uPVC, but now you can get the French door look with all the strength, durability and good looks of a composite construction, and with the same choice of beautiful colours, inside and out. You can also specify them for either inward or outward opening movement.

STABLE DOORS

For kitchen or back doors, a composite stable door brings a whole new dimension to this part of your home. Enjoy all the benefits of a uPVC door but with none of the maintenance hassle of a traditional timber stable door.

Whether you want inward or outward opening, our composite stable doors are available in any of our colours, both inside and out, and the majority of our styles - excluding some Italia designs - ask for details.

We can also manufacture composite stable doors to any size, such as the one on the right which measures just 1740mm x 940mm.

Complete the farmhouse look with our extensive range of traditional and contemporary ironmongery, including door knockers, door handles and letter plates. Our Accessories pages show the full range.

"Great service, from the initial showroom meeting and detailed presentation to the installation - excellent experience all round. Really happy with the finished product and the guys who installed. Would definitely recommend..."

PREMILINE PATIO

For that understated architectural look the Premiline Patio range of sliding doors from Kommerling are available with 2, 3 or 4 panel openings. Subtle, understated but also incredibly strong, these doors also feature high security locking mechanisms operated through a patented interlock shootbolt system.

Premiline Patio meets the requirements of Lifetime Homes standard, developed as a quality benchmark by the Joseph Rowntree Foundation. Our close working partnership with Kommerling means that all these products will be designed to meet your exact specifications, from initial technical measurements to our final expert installation.

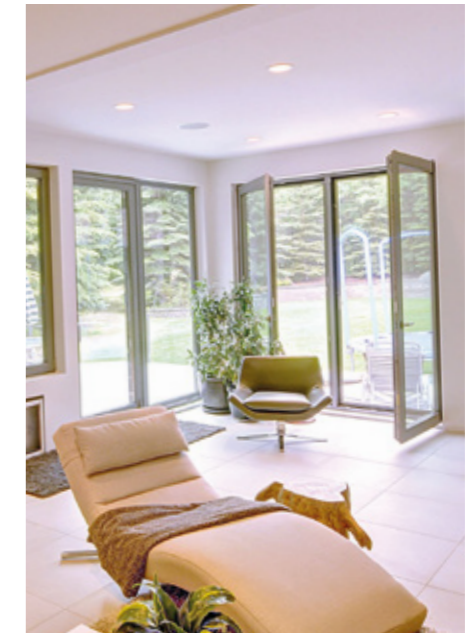

IMAGE COURTESY OF KOMMERLING

BI-FOLD & SLIDING DOORS

Bring the outside in with bi-fold or sliding doors, and create an inviting space for those spring, summer and autumn months when you just want to make the most of the sun.

Choose from 2, 3 or 4 pane door systems which can span up to 6 metres - ideal for large openings such as open plan kitchen/dining areas.

Aluminium

We can manufacture slimline aluminium bi-fold and sliding doors to replace entire walls to expand your living area and create a sense of open space. By reducing the sight lines, we can optimise the amount of natural daylight that floods into the room.

We fit Pilkington KS Glass as standard to all our bi-fold and sliding doors which, thanks to its low emissivity, achieves high energy ratings. (See our Energy pages for more information).

This advanced technology glass reflects heat back into the room whilst also letting heat in from the sun. We can also fit integrated blinds into your bi-fold doors as the picture above.

uPVC TILT & SLIDE PATIO

As an alternative to a bi-fold door, Kommerling's tilt and slide door is a great solution, giving you the option to both slide the doors open or tilt if you just want to allow a light breeze into your home.

These patio doors come with an internal handle as standard, with the option for an external handle to be added.

FLUSH SASH WINDOWS

The windows and doors industry continues to thrive on innovation, and the very latest development is flush sash windows from Kommerling, also known as flush casement windows.

The reason why this innovative new window design is so popular is that it has such a clean, minimalist look. Already very common in Scandinavia, flush sash windows are characterised by sashes that finish flush with the external face of the window.

Thanks to decades of research and development and comprehensive expertise from Kommerling, the external flush contours you see on flush sash windows can now be designed to mimic the look of traditional casement windows made of timber. You can now benefit from high performance uPVC window design packed with heritage features, but with none of the high maintenance that comes with traditional timber.

One of the key advantages of both our 070 and C70 flush sash windows is they can reach an impressive U value of 1, which meets the new building regulations introduced in June 2022 to address higher standards of thermal efficiency.

Under these new regulations, all new replacement windows and doors must achieve a thermal efficiency U rating of 1 W/m² or less. If you're looking for architectural harmony, or just a clean, minimalist look, flush sash (or flush casement) windows are the way to go.

uPVC WINDOWS, DOORS & CONSERVATORIES

Apart from aluminium frames and composite doors, we also offer a comprehensive range of uPVC windows, doors and conservatories. Whatever the style or finish, all our products are available in a choice of foil-laminated colours. Durable, hard-wearing and weather resistant. Dual and additional colours are available on request.

We offer a standard colour and eight premium colours.

COLOURS AVAILABLE

PREMIUM

COLOURS AVAILABLE

The following colours and woodgrains form part of our 2021-2022 range and benefit from an upgraded surface. For other options please speak to your local Kömmerling partner.

uPVC WINDOWS

We manufacture an extensive range of window styles, including:

- Patio (with tilt and slide option)
- Casement sash (with sash horns)
- Tilt and turn (with concealed window hinges)

Our coloured window frames are also available with coloured interior trims to complement the frames. They're also manufactured with internal beading as standard.

We can also supply and install roofline fascias, soffit boards and cladding to match.

Head over to our website to find out more.

uPVC DOORS & STABLE DOORS

In addition to our range of uPVC windows, we manufacture a wide selection of uPVC door styles including residential front doors, French doors, patio doors, and stable doors. All of these are fully reinforced with galvanised steel.

All our uPVC residential doors are fitted with state-of-the-art locking mechanisms and handles, as standard, including shot bolts and hooks to top and bottom, dead bolts and four rollers for compression.

Security cylinders are fitted to all doors as standard.

CREAM uPVC FRENCH DOORS WITH SIDE PANELS AND CAT FLAP

WHITE PVC CONSERVATORY WITH SELF-CLEANING ROOF

uPVC FRENCH DOORS

Bring the outside in with this stylish addition to your home, available in a choice of colours (inside and out), with the peace of mind that comes from knowing they're safe and secure too.

Offering unrestricted views to your patio, garden or conservatory, our range of uPVC French doors are internally beaded and have a multi point locking system as standard.

Energy efficient and high quality, you can have them opening inwards or outwards, and choose from our accessory range if you want non-standard handles (additional cost may apply).

ANTHRACITE GREY ON IRISH OAK PVCU FRENCH DOORS

BESPOKE SHAPED PVCU FRENCH DOORS IN IRISH OAK

uPVC CONSERVATORIES

A Victorian invention, but now a stylish addition to modern, contemporary homes, a uPVC conservatory creates an extra room that brings light and warmth to your home during spring, summer and autumn.

Glass and polycarbonate are the two main materials used for conservatory roofs, which come in a range of different colours and various heat guarding foils to regulate heat.

Our vast experience of designing and installing conservatories means you can be assured of the highest quality standards, with each one made to your own style preferences and specifications. And as project managers we oversee the whole process to make it as stress-free as possible for you.

WHITE CONSERVATORY WITH SUNBURST DESIGN AND POLYCARBONATE ROOF

Flush Sash

KOMMERLING

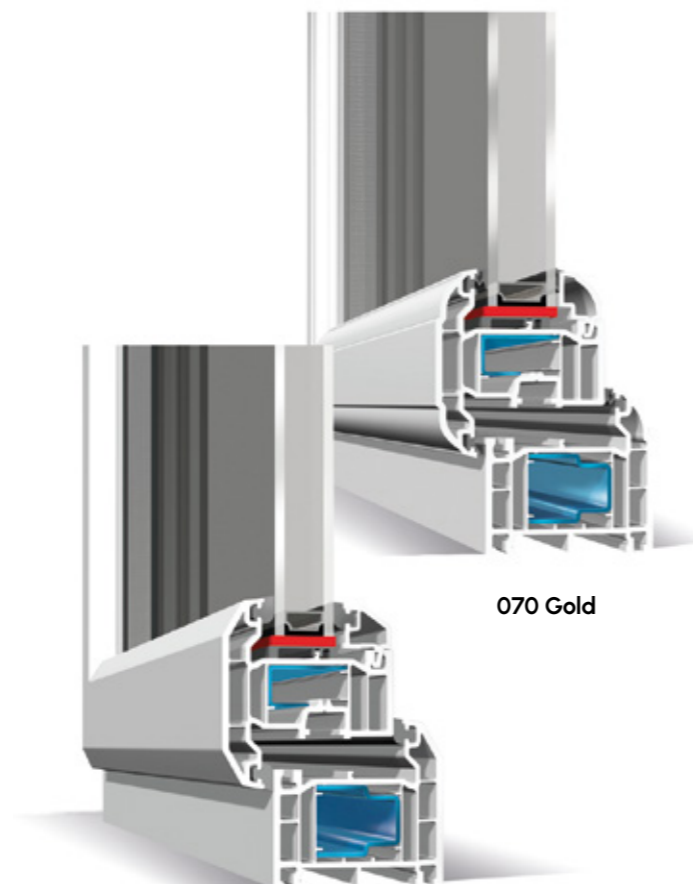

We believe the Kommerling 070 Gold and C70 uPVC systems are the best products available on the market, which is why we only manufacture our windows and doors using these systems. It means you're investing in premium quality products that will last the test of time and stay looking good.

070 Gold:

- 5-chambered with revolutionary ovolo or rounded profiles, providing a unique combination of classic appearance and state-of-the-art performance
- Curved slimline frame and opening sash create a 'softer' appearance while offering unrivalled benefits
- Steel reinforced profiles
- High security multi-point locking and shoot bolts
- Extruded using a lead-free uPVC Greenline compound
- Fitted with Pilkington KS glass
- Meet or exceed Level C on Energy Rating Certificate in accordance with latest Building Regulations

C70:

- This is also a 5 chamber system but its chamfered finish creates a more modern look and feel but without compromising thermal efficiency or security.

C70

PILKINGTON KS GLASS

The smart glass technology that helps save and generate heat from the sun

Since 2002, we started using Pilkington's K glass as standard, and from 2010 we moved on to its more advanced KS glass which offers high levels of energy efficiency and lower emissivity. Low emissivity coated glass reflects heat back into the room, whilst also letting in free heat from the sun - this is known as passive solar gain. Pilkington KS Glass helps windows and doors achieve high energy ratings in order to comply with Building Regulations Part 1.

All windows and doors are fitted with high quality handles, and high security, state-of-the-art locking mechanisms.

Upgrades on ironmongery are available to suit your individual taste. See p51-52 for details.

"Having had all our windows and doors of our bungalow replaced by Lockwood Windows, we have no hesitation in recommending this company.

The recommendation starts from Richard coming to give us an estimate and advising us of things we hadn't thought of and things we didn't need, Raymond in the showroom advising us of the finer details of the items, through to the fitters, Matthew and Luke who were polite, courteous, jovial and friendly and cleaned up continuously.

The quality of the windows and doors is excellent and has made such a difference to the appearance of our bungalow."

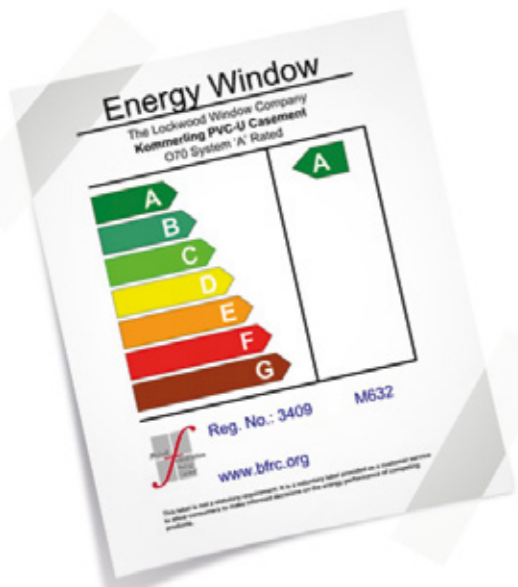

ENERGY & SECURITY FOR YOUR WINDOWS

You insist on the best, and so do we.

Now, more than ever, we value the energy we use to heat our homes. And windows and doors can play a really big part in making our homes as energy efficient as possible.

The British Fenestration Rating Council (BFRC), in conjunction with the UK glazing industry has designed a window rating system which provides simple and accurate information regarding the energy efficiency of each product.

Make the right choice, with the right information

The BFRC provides third party certification for the total performance of windows, which are rated using the familiar A to G scale on the basis of their total energy efficiency, with A being the highest rating and G the lowest.

As a consumer, this makes it easy to understand the performance of each window product, and also for government inspectors to quickly see if a window meets the legal requirements.

Don't fall into the trap of making a decision based on a false economy. In order to achieve a C rated window or above, some companies choose to use a basic uPVC system which achieves the required efficiency rating. However, the downside is that all-important security is compromised by the use of a thermal plastic sleeve for reinforcement, or no reinforcement at all.

Before deciding on which company to use for your new or replacement doors and windows, take a look at our checklist.

For your complete peace of mind, all windows supplied and/or installed by Lockwood Windows are A-rated as standard.

1 Is your supplier part of the BFRC authorised retailer scheme or a member of FENSA? This provides you of assurances of their professionalism and standards.

2 Does the supplier use the A-E energy-efficiency rating? This will help you make a more informed choice as to which windows you choose.

3 Do the frames of your new windows have integral metal reinforcement to maximise security? Window frames without this will not be as secure.

4 Is your supplier listed in the Master Window and Conservatory Installers Association's Top 100 list?

At Lockwood Windows we are not prepared to compromise on security or quality, and have invested heavily to provide the most energy efficient and secure window systems available on the market today.

ACCESSORIES

The finishing touches to create that brilliant first impression on your door.

It's the tiny details that make all the difference, which is why we offer a wide range of handles, knockers, letter plates and numbers for both composite and uPVC doors, windows and conservatories.

Traditional or contemporary, our range of styles and finishes will help you create the look you want to achieve.
